

Laura's Quick Start — DSI Claude API Credit Award

Start here. This is the short decision and action sheet for Laura as the PI and Good Grants submitter. The project requests **CAD \$75,000 in Claude API credits over 12 months** to develop and evaluate a calibrated privacy firewall for deciding what medical/public-health data representations may be shared with cloud AI, for which tasks, and under what safeguards.

Lennon is not PI-eligible and must not be listed as PI. Laura is the sole PI and submits the application. Lennon is listed as project lead/technical collaborator if the portal allows it.

What we need from Laura

Please confirm or provide:

1. **Eligibility and external-grant evidence:** confirm PI eligibility and provide the exact qualifying grant agency/program, title, status/date, and lead-applicant wording.
2. **Request and scope:** approve or revise the CAD \$75,000 request; confirm the 3–5 trainee plan and whether PHO should remain a conditional potential pilot partner.
3. **PI materials:** provide the CV PDF and confirm the DSI demographic survey is current or complete it.
4. **Portal choices:** select the closest permitted collaborator role for Lennon (never PI), check whether a full-proposal upload is available, and accept the required terms.
5. **Submission:** enter and proofread the application in Good Grants, then submit it.

Suggested order

1. Read the [portal-ready application](#) and reply with requested edits/decisions. Its short-field word counts have been checked.
2. Consult the [budget model PDF](#) for cost assumptions and the [full proposal PDF](#) only for scientific/methodological detail.
3. Use the [full application packet](#) as a form-by-form guide while entering responses; it is a reference, not required cover-to-cover reading.
4. Open the [Good Grants application](#) and complete submission as PI.

Lennon's team entry (if the portal permits a collaborator)

- **Name:** Ye Lennon Li, PhD, P.Stat.; **email:** ye.li@utoronto.ca
- **Affiliations:** Public Health Ontario; University of Toronto
- **Division:** Dalla Lana School of Public Health, University of Toronto
- **Unit:** Division of Biostatistics, Dalla Lana School of Public Health
- **Suggested role:** Project Lead / Technical Lead — AI Privacy-Firewall Architecture and Software Methods.

If the portal offers only PI/trainee roles, do not enter Lennon as PI; Laura can ask DSI how to record a collaborator or leave him in the project narrative.
